Warehouse Management System

Keep track of your inventory

The Advanced Warehouse Management system is an integral part of your manufacturing and distribution processes. It works in conjunction with the Inventory Management and Shop Floor Control systems to manage your inventory and the products that you produce and ship.

Generally, warehouse management system divides in two main operation flows and many partial operation flows and follow below steps for WMS Management System. Our system defines till pallet management for customer.

Warehouse Management contains different processes

- | | |
|-----------------------------------|--------------------|
| 1 Admin Panel & Rights Management | 6 Finance |
| 2 In-Bound | 7 Accounts |
| 3 Out-Bound | 8 Dashboards & MIS |
| 4 Stock Management | 9 Other Exceptions |
| 5 HR management | |

Benefits

1. Decrease User mistake, as all process depends on scanning system.
2. Actual space allocation.
3. Display SKU allocation Place Till to pallet.
4. More pallet CFT use for Put away Process.
5. Manage Open Storage area.
6. Manage all type of SKU like as Heavy, palletize and bulky.
7. Relocation and reassign of SKU location.
8. Assign and check actual allocation space of supplier with sub supplier or sub customer.
9. Invoice management and process related document management.
10. Realtime supplier Stock Dashboard for supplier and admin Dashboard.

In-bound

SKU to be placed

- **Token Generation**
It is internal process for confirmation of arriving vehicle for loading Load and Unload process. It is also check vacant CFT of any arrival supplier. we can manage TAT (turn around time) of particular vehicle
- **Gate Pass Generation**
Its security reason for our warehouse system, it is totally depending on Token, Without Token vehicle not accepted on Gate Entry.
- **GRN Generation (Goods Receive Note)**
GRN Process Start with Scan Our TOKEN Print and Receive all SKU Of Arrive Vehicle and Confirm all are correct or not, even check duplicity with our system With auto ASN process.
- **Put Away Process**
System get all empty palate list related to particular supplier and customer and Convenient space suggests to user.
- **Update Put Away Process**
If any user dose make mistake then change reallocation of any SKU using update put away process

WAREHOUSE Management System

Out-bound

SKU to be Picked

- Order Entry
Order list will get checked and verify SKU quantity with warehouse stock.
- Pick Ticket Generation
System suggest all needed SKU Location on our warehouse palate with real Location Name.
- Pick Ticket Update
If user takes wrong SKU then use update pick ticket module and reallocation of SKU related to actual assigned location.
- Loading sheet Generation
Ready to send All Order SKU to Customer using this module. All SKU Load on Vehicle with using scanning device for security purpose or wrong SKU delivery.
- Loading sheet Update:
Confirmation of dispatch our Loading Sheet to Customer
